Art Unit: 2615

1. Applicant's arguments with respect to claims 1-19 have been considered but are moot in view of the new ground(s) of rejection.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Chen et al (US 2004/0169746 A1).

Chen et al discloses in Fig. 2, CMOS array 6 in a single integrated circuit 20, that comprises the substrate of a semiconductor material (IC 20,[0023]), imaging array formed in said substrate and having a plurality of picture elements (pixels) each pixel being adapted to receive light and convert the light to an electrical signal (CMOS sensor array 6), said imaging array having an output port for providing the electrical signals from the pixels representing an active video image (an

output terminal is inherently included at the CDS 44 so as to provide pixel signals to buffer 22, [0027]), first circuit formed in said substrate and connected to receive the pixel signals and for analyzing the pixel signals in-real time to provide a defective pixel output signal indicating if any one pixel of the plurality of pixels in the imaging array is defective, as the pixel is being processed to generate the active video image (defective pixel filter 34 is formed on IC 20, where the filter receive and analyses a pixel in real time so as to provide a defective pixel signal as the pixel is processed to generate the video image signals, [0025], [0028 and [0031])).

3. Claims 2-11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. Claims 12-19 are allowed.

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is

reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
